Pre-Trade Checklist

What's Inside This Guide

The Intelligence Hub answers six questions every serious trader needs answered. This guide explains each engine with concrete examples so you know exactly what to look at and what to do with it.

- 1  What Makes Me Money? — Trading DNA & Pattern Detection**
Discover which sessions, setups, emotions, and conditions consistently produce your best trades. Stop guessing, start repeating your edge.
- 2  What Costs Me Money? — Psychology Cost Calculator & Risk Patterns**
Puts a real dollar figure on revenge trading, tilt sessions, and broken rules. Shows you exactly where your money is leaking.
- 3  What Should I Improve? — Self Awareness & Discipline Analytics**
Measures how accurately you rate your own trades and how often you follow your rules. Pinpoints the one behavior to fix next.
- 4  How Am I Evolving? — Psychology Timeline & Weekly Reports**
Shows your journey month by month — psychology score, discipline, mood, and P&L together in one view. Weekly coaching summary every Sunday.
- 5  What Should I Do Now? — AI Coach Feed & Pre-Trade Checklist**
Your coach gives one specific action based on your actual data — not generic advice. The checklist converts that insight into a behavior before your next trade.
- 6  Full Feature Summary & Quick Reference**
One-page summary: what each engine does, what it needs, and what action to take from it.

HOW THE INTELLIGENCE HUB WORKS

Every engine in the Intelligence Hub reads from your **actual logged trades** — pair, session, setup, emotion, mood, P&L, review quality, and rule adherence. The more trades you log with complete psychology data, the more precise every engine becomes. Think of it as a feedback loop: log → analyze → improve → log better trades.

Section 1 of 5

What Makes Me Money?

Trading DNA

Your repeatable edge fingerprint — what conditions produce your best results.

Trading DNA analyses all your trades and breaks down your performance by **session, mood, confidence, day of week, and instrument**. It finds the specific conditions where *you personally* perform best — not what works for traders in general, but what works for *you*.

EXAMPLE — TRADER "ARYAN" WITH 48 LOGGED TRADES

SESSION	TRADES	WIN RATE	AVG P&L	YOUR EDGE
London Open	18	68%	+\$124	STRONG
New York	14	52%	+\$31	AVERAGE
Asian Session	9	33%	-\$88	AVOID
Pre-market	7	29%	-\$142	AVOID

DNA INSIGHT

Aryan's London Open is where he has a genuine edge — 68% win rate vs 33% in the Asian session. **Stopping pre-market trading alone would have saved \$142 this month.** The DNA doesn't tell him what to trade — it tells him *when he is himself* as a trader.

MOOD	TRADES	WIN RATE	WHAT TO DO
😄 Peak (5/5)	11	73%	Trade your full plan
😊 Confident (4/5)	19	63%	Good to trade
😐 Neutral (3/5)	12	50%	Reduce size
😞 Anxious (2/5)	6	33%	Paper trade only

Best Patterns — Pattern Detection Engine

Pattern Detection Engine

Finds repeated condition combinations that produce better entries and stronger P&L.

Where Trading DNA looks at single variables (session OR mood), the Pattern Detection Engine finds **combinations**. It asks: "When you traded London + Confident + Breakout setup, what happened compared to London + Anxious + Breakout setup?" Two identical setups in the same session can produce opposite results depending on your state.

EXAMPLE — TOP DETECTED PATTERNS

PATTERN (COMBINATION)	OCCURRENCES	WIN RATE	AVG P&L
London + Confident + Breakout	9	78%	+\$187
NY + Peak Mood + Trend Follow	7	71%	+\$134
London + Neutral + Reversal	8	50%	+\$12
Asian + Stressed + Any Setup	6	17%	-\$218

PATTERN INSIGHT

"London + Confident + Breakout" is Aryan's highest-edge pattern. It shows up 9 times with a 78% win rate. This is not a coincidence — it's a **repeatable edge** he can now intentionally prioritize. Meanwhile, "Asian + Stressed + Any Setup" is a pattern he should have a rule to avoid entirely.

WHY THIS MATTERS FOR TRADERS

- Most traders think they have "one edge" — but they actually have multiple conditions that must align. This engine surfaces those combinations.
- You can now make a rule: *"I only enter London Breakout setups when my mood is 4 or 5."* That's an edge rule built from your own data, not someone else's strategy.
- Unlocks after logging at least 15 trades with complete setup + session + emotion data.

What Costs Me Money? — Psychology Cost Calculator

Psychology Cost Calculator

Puts a real dollar figure on every emotional behavior and mistake you repeat.

Most traders know they revenge trade — but they've never seen the actual cost. The Psychology Cost Calculator groups all your trades by emotion, mistake type, and broken rule, then calculates exactly how much each behavior has cost you in real P&L. **You can't fix what you can't measure.**

EXAMPLE — EMOTIONAL COST BREAKDOWN

EMOTIONAL TRIGGER	TRADES TAGGED	WIN RATE	TOTAL COST	AVG PER TRADE
🔥 Revenge	8	25%	-\$502	-\$62.75
👀 FOMO	5	20%	-\$318	-\$63.60
💰 Greed	6	33%	-\$241	-\$40.17
😌 Calm	19	68%	+\$892	+\$46.95

💡 COST INSIGHT

Revenge trading has cost this trader **\$502 across 8 trades** — a 25% win rate vs 68% when calm. If they had skipped every revenge trade this month, they would have made an extra \$502. That's not a discipline lecture — that's a dollar amount sitting in front of them.

MISTAKE COST BREAKDOWN

MISTAKE TYPE	TIMES MADE	TOTAL COST	WHAT IT SIGNALS
No Stop Loss	4	-\$611	Risk management gap
Chased Price	7	-\$389	Patience/entry timing
Overleveraged	3	-\$277	Size discipline
Early Entry	9	-\$204	Confirmation needed

Risk Pattern Detection

Risk Pattern Detection

Detects repeated loss clusters, tilt spirals, and dangerous condition combinations before they wipe your account.

A single bad trade isn't a pattern. But losing 3 trades in a row on Mondays, always after a green Friday, while trading the Asian session — that's a risk pattern. This engine detects exactly those clusters so you can add a rule before they repeat.

EXAMPLE – DETECTED RISK PATTERNS

⚠️ TILT SPIRAL DETECTED

Pattern: After 2 consecutive losses, you have taken a 3rd trade within 15 minutes — 7 out of 7 times. That 3rd trade has a **0% win rate** and an average loss of **-\$143**.

Rule suggestion: No trading for 30 mins after 2 consecutive losses.

⚠️ MONDAY LOSS CLUSTER

Pattern: Mondays account for 41% of your total losses despite representing only 20% of your trading days. Win rate on Monday: **28%** vs your overall **54%**.

Rule suggestion: Observe—only on Mondays until market direction is confirmed by Tuesday.

⚡ SIZE ESCALATION AFTER WINS

Pattern: After 3 consecutive wins, your average lot size increases by 2.3x. Your win rate on those oversized trades drops to **38%** — suggesting confidence becomes overconfidence.

Rule suggestion: Cap lot size at baseline regardless of streak length.

Section 3 of 5

What Should I Improve? — Self Awareness & Discipline Analytics

Self Awareness Engine — Review Calibration

Measures how accurately you rate your own trades vs how they actually performed.

After every trade you mark: "Would I retake this trade?" The Self Awareness engine compares your answer to the actual outcome. If you said "Yes, good trade" but it lost — that's poor calibration. If you said "No, bad process" and it won by luck — that's also poor calibration. **The goal is accurate self-assessment, not just winning.**

REVIEW CALIBRATION MATRIX

SELF REVIEW	ACTUAL OUTCOME	COUNT	WHAT IT MEANS
✓ Good process	Win	14	Perfectly calibrated
✗ Bad process	Loss	9	Correctly identified mistake
✓ Good process	Loss	7	Good process, bad luck (fine)
✗ Bad process	Win	4	⚠ Won for wrong reasons — danger zone

CALIBRATION INSIGHT

This trader has 4 "bad process wins" — trades where they broke their rules but profited anyway. These are the **most dangerous trades in the journal**: they reinforce bad habits by accidentally rewarding them. The Self Awareness Engine flags these so you can consciously reject the false positive.

Discipline Analytics — Rule Follow-Through

Tracks how often you follow the setup rules you set for your own strategy.

PLAN ADHERENCE

75%

Rules followed per trade

MOST BROKEN RULE

No SL

Skipped 6x this month

ADHERENCE VS WIN RATE

+34%

Higher WR when rules followed

Section 4 of 5

How Am I Evolving? — Psychology Timeline & Weekly Reports

Psychology Timeline — Mindset Evolution

Your psychology score, discipline, mood, milestones, and P&L plotted together across months.

The timeline answers: "Am I actually getting better, or just getting lucky?" It shows every key metric on a single chart so you can see if discipline improvements are actually translating to better P&L.

MONTH	PSYCHOLOGY SCORE	DISCIPLINE	AVG MOOD	MONTHLY P&L	TREND
March	41/100	52%	2.8 / 5	-\$1,240	Struggling
April	58/100	67%	3.2 / 5	-\$380	Improving
May	72/100	78%	3.7 / 5	+\$620	Turning
June	81/100	84%	4.1 / 5	+\$1,890	Profitable

TIMELINE INSIGHT

This trader went from -\$1,240 in March to +\$1,890 in June. The timeline reveals *why*: discipline improved from 52% to 84%, psychology score from 41 to 81. **The P&L improvement lagged the psychology improvement by about 6 weeks** — exactly what the timeline is designed to show. You change your mind before you change your results.

Weekly Reports — Review Cycle

Every Sunday: a coaching summary of the week with mistakes, improvements, and next-week actions.

EXAMPLE WEEKLY REPORT — WEEK OF JUN 9

This Week's Wins

- ✓ Followed SL rules on 9/10 trades
- ✓ Avoided Asian session completely
- ✓ Best win rate week (71%) since Jan

This Week's Mistakes

- ✗ 2 FOMO entries on Thursday
- ✗ Sized up after 3-win streak
- ✗ No journal entry on Friday

Next Week's Focus

Maintain SL discipline. Add a rule: no trades in the 30 mins following a news event. Cap lot size at 0.1 regardless of streak.

Section 5 of 5

What Should I Do Now? — AI Coach Feed & Pre-Trade Checklist

AI Coach Feed — Personalized Coaching

One specific, evidence-backed action pulled from your actual trading data — not generic advice.

Generic trading advice is everywhere. The AI Coach Feed only shows you insights derived from *your data*. Each card shows: observation, evidence (which trades), action (what to do), and expected outcome (what will change).

HIGH PRIORITY

REVENGE TRADING

RISK MANAGEMENT

Your 3rd trade after consecutive losses has a 0% win rate

In 7 separate sessions, after losing 2 trades in a row, you have entered a 3rd trade within 15 minutes. All 7 of those trades resulted in losses, with an average drawdown of -\$143. This is a tilt spiral — the loss triggers an emotional need to "get it back," which bypasses your analytical process entirely.

RECOMMENDED ACTION

Add a hard rule: after 2 consecutive losses, close the platform for at least 30 minutes. Walk away, journal the emotion, and re-enter only with a fresh checklist. Expected impact: eliminating this pattern adds ~\$1,001 back to your monthly P&L.

OPPORTUNITY

LONDON SESSION

You are under-trading your highest edge window

Your London Open + Confident + Breakout pattern has a 78% win rate across 9 trades — your highest performing combination. Yet you're averaging only 2.1 trades per week in this window versus 4.7 in the Asian session (33% win rate). You're spending energy where you have no edge, and conserving it where you have significant edge.

RECOMMENDED ACTION

Prioritize 3–4 trades per week in the London Open window. Reduce Asian session frequency by 70%. Expected impact: shifting allocation alone should improve monthly P&L by ~\$600 without changing your strategy.

Pre-Trade Checklist — Convert Insight into Execution

Run your setup rules before entering a trade. Intelligence becomes a real behavior, not just a chart.

Every insight in the Intelligence Hub is only valuable if it changes your actual behavior. The Pre-Trade Checklist is where analysis meets execution. Before you click Buy/Sell, you run through your own rules — the ones you built from your own data.

EXAMPLE CHECKLIST (ARYAN'S RULES BUILT FROM HIS DNA)

- ✓ **Session check:** Am I in London Open or NY session? (Asian session → skip trade)
- ✓ **Mood check:** Is my mood 4 or 5 out of 5? (3 or below → reduce size by 50% or skip)
- ✓ **Tilt check:** Have I lost 2 or more trades already today? (Yes → close platform for 30 min before re-entering)
- ✓ **Setup confirmation:** Does this match my Breakout or Trend Follow setup criteria?
- ✓ **SL check:** Is my stop loss placed before I enter? (No SL = no entry)
- ✓ **Size check:** Is my lot size at baseline regardless of my current win streak?
- ✗ **FOMO check:** Am I entering because price is already moving? (Yes → wait for the next setup)

✓ WHY THE CHECKLIST MATTERS

Most traders know their rules but break them in the moment. The checklist turns knowledge into a physical gate. Traders who run a pre-trade checklist consistently show **+22–34% improvement in rule adherence** within 4 weeks. Your discipline score tracks this — so you can see the improvement in the Discipline Analytics over time.

HOW ALL 6 ENGINES CONNECT

Trading DNA finds *when* you have an edge → **Pattern Detection** finds *which combinations* are strongest → **Cost Calculator** shows *what is leaking* your P&L → **Risk Patterns** shows *when you're about to blow up* → **Self Awareness** shows *how accurately you see yourself* → **Timeline** shows *if you're actually improving* → **AI Coach** turns all of this into *one action to take today* → **Checklist** makes sure *you actually do it before the next trade*.
